

NEW STUDDABLE WINTER TYRE

NEW FOR 2017

ICE BLAZER WST3

PERFORMANCE RATINGS:

Special Tread Compound

The winter tread formula allows the tyre to maintain elasticity to improve grip in extreme cold weather conditions.

Stud Design:

Variable stud arrangement and padded stud design ensure the studs don't move or come loose, which ensures they improve grip on ice and snow.

Ice and Snow Handling:

New sipe pattern and saw-tooth block edges provide better handling and stability on snow and ice.

Traction:

The directional tread pattern and sipe design greatly improve snow, slush, and water drainage.
